# FS 365 Complete Bike Protector

**FS 365** is an all over protector spray for motorcycles and scooters

It is easy to apply – simply spray before or after a ride, to a clean or dirty machine and it will leave a protective layer that when it comes to cleaning is easily washed off with water, taking all the dirt and contaminants away with ease. **FS 365** will protect all metal parts from corrosion, is safe on all materials including carbon fibre, plastics, chrome, and even matt paint finishes.

Applied liberally **FS 365** gets into all the hard to access areas protecting the parts you cant even see.

**FS 365** makes caring for your motorcycle or scooter as easy as:

**Spray, Ride, Rinse, Repeat!**

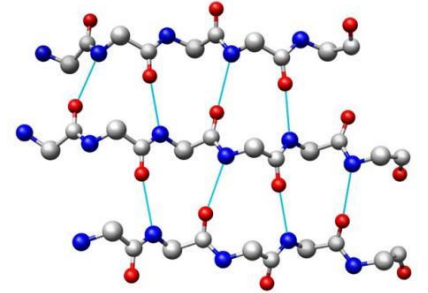

# FS 365 Complete Bike Protector

## What is FS 365?

**FS 365** is an all over protector spray for motorcycles and scooters. Combining a mineral oil emulsion with corrosion inhibitors, once sprayed on, the water content carries it into all the hard to reach places before evaporating and leaving a film of protection on all surfaces. Dirt that would normally stick to your bike now attaches to the protective layer. To remove the dirt, simply wash with water and the dirt just falls off.

## How to apply

Spray liberally over the entire machine. First application should be on a clean bike, then you can re-apply to a wet or dirty bike during your normal daily use to build up layers of protection. **FS 365** is safe to use on all components, including chrome, plastics, suspension parts, seals, bearings and transmission components. If you spray **FS 365** on the brake discs or calipers don't panic as it can be easily washed off with water without contaminating your brake pads and without the need for degreasing unlike some other products.

**FS 365** makes cleaning easier and provides layers of protection.

**Spray, Ride, Rinse, Repeat!**
